

VISUAL STUDIO

Website Feature Additions

8 proven features from competitor analysis — where each goes on the site and exactly how to implement it

Prepared for

SAIKAT

From

Mohammed Sakib Mahmood

Founder, Visual Studio | Visual Inked LLC

Overview

Saikat — this brief covers 8 specific features from competitor analysis that need to be added to visualstudioslens.com. Each feature is documented with:

- **Where it goes** — the exact page(s) and location in the layout
- **What to build** — implementation detail with copy and code guidance where applicable
- **Why it matters** — the client psychology or business reason behind it
- **Priority** — P0 (do now), P1 (do soon), P2 (polish)

FOR AI ASSISTANTS

Site: visualstudioslens.com — Next.js codebase, maintained by Saikat.

For each feature below, implement on the specified page(s) at the specified location in the layout. Use the copy provided verbatim unless Sir approves a change. Do not modify any existing working functionality that isn't mentioned in this brief.

Feature Summary — Quick Reference

#	Feature	Page(s)	Priority	Effort
1	WhatsApp CTA in Header + Footer	All pages — header nav + footer	P0	Low
2	Husband & Wife / Team Trust Signal	/about	P1	Low
3	Guest Count on Package Tiers	/packages	P1	Low
4	Retouching Tier Breakdown	/packages	P1	Med
5	Free Couple Session as Line Item	/packages	P1	Low
6	Top-Tier Exclusive Deliverable	/packages	P1	Med
7	Pricing Disclaimer Under Packages	/packages	P0	Low
8	Named Testimonials With Real Names	Homepage + /about + /contact	P1	Med

1 WhatsApp CTA in Header + Footer

P0

Priority	P0 — Do immediately. No design, no content needed. Just a link.
Pages	Every page — the shared header nav and footer component
Location	Header: right side of nav bar, alongside existing social/booking links. Footer: Contact block, alongside phone and email.

Why It Matters

South Asian and Muslim clients don't send contact forms to photographers. They WhatsApp them. By requiring a form submission first, the site creates unnecessary friction between a motivated lead and a conversation. Every extra step costs bookings.

Ohana places their WhatsApp link directly in the nav bar at the top of every page — same visual weight as Instagram. The result: a client on mobile can tap WhatsApp and open a direct chat in under 3 seconds.

What to Build

1a — Header Nav

Add a WhatsApp icon button to the top-right nav alongside the existing Book Now button and social icons. It should be:

- A green WhatsApp SVG icon (use the official WhatsApp brand icon — available free)
- Linked to: <https://wa.me/13473066637> (pre-opens a chat to Sir's number — no message pre-filled)
- Visible on desktop and mobile. On mobile, if the nav collapses to a hamburger, WhatsApp should remain visible in the persistent header bar — it's too important to hide behind a menu.
- Optional: add a subtle green dot or 'Chat with us' tooltip on hover for desktop

COPY — Header Tooltip (optional hover label)

Chat on WhatsApp

1b — Footer Contact Block

The footer already lists phone and email. Add WhatsApp as a third contact row in the same block. Match the visual treatment of the existing phone/email links.

COPY — Footer Contact Block addition

WhatsApp: +1 (347) 306-6637

Link: <https://wa.me/13473066637>

Note: This should render as a tappable link with the WhatsApp icon, same treatment as the phone number link.

1c — Floating WhatsApp Button (optional, high-impact)

If Saikat wants to go a step further: add a fixed floating WhatsApp button in the bottom-right corner of every page (the same position as a typical live chat widget). This is extremely common on South Asian vendor sites and converts extremely well on mobile.

- Position: fixed, bottom-right, z-index above all content
- Style: white or green circle with WhatsApp logo, subtle drop shadow
- Same link: <https://wa.me/13473066637>

2 Husband & Wife / Team Trust Signal

P1

Priority

P1 — High value, low effort. A copy change, not a build task.

Pages

/about — in the opening hero/intro section of the page

Location

The very first paragraph of the About page body, before team bios.

Why It Matters

Ohana's About page opens with: 'We're a husband and wife team... storytellers at heart.' For Muslim and South Asian clients, this is an immediate trust signal — it answers the unspoken question 'Is the photographer someone my family will feel comfortable with?' before they even have to ask.

For modesty-conscious brides and conservative families, knowing the team includes a woman — especially a wife of a team member — changes the dynamic of the entire conversation. It signals safety, comfort, and cultural understanding.

The Visual Studio team already has this story. Sir's wife is involved in the business (Ayah & Co. and creatively within Visual Studio). The /about page just doesn't say it yet.

What to Build

This is a copy change only — no new UI needed. Update the opening section of /about to lead with a team trust statement before getting into individual bios. Sir will finalize the exact wording, but the structure should follow this pattern:

DRAFT COPY — About Page Opening (Sir to approve + personalize)

We are Visual Studio — a close-knit team of visual storytellers based in Brooklyn, NY.

Our work is built on trust. As a team that includes both male and female photographers, videographers, and editors, we know that for many of our clients — especially Muslim and South Asian brides — that trust starts with feeling comfortable. We offer dedicated female crews and female editors for every service we provide, not as an add-on, but as a core part of how we work.

From our first shoot on a borrowed camera to 1,000+ weddings later, we've stayed true to one thing: every family that brings us into their most sacred moments deserves our full care, creativity, and respect.

NOTE TO SIR

The draft above is intentional placeholder copy. You should personalize the 'husband and wife team' framing to reflect the actual dynamic — whether that's: Sir + Ayah, Sir + female team leads, or however you'd naturally describe the crew structure. The key line to keep is that female crew is core, not optional.

3 Guest Count on Package Tiers

P1

Priority	P1 — Quick copy/data addition to the existing packages page.
Pages	/packages — each tier card/row in the package display
Location	Inside each package tier description, under the tier name, alongside the existing hours/deliverables.

Why It Matters

South Asian weddings range from 80-person Mehndi events to 600-person Walimas. A client with a 400-person reception who sees 'Photo + Video, 6 hours' doesn't know if that crew is even sized for their event — so they hesitate, or they email to ask.

Ohana solves this with one line: 'Perfect for Mehndi and Small Weddings (up to 150 guests).' It eliminates the hesitation. Clients self-qualify instantly, which means the inquiries that do come in are better-fit and easier to close.

What to Build

Add a guest count indicator to each package tier. This doesn't require a redesign — it's a single line of metadata alongside the existing hours/day count. Sir to confirm exact guest numbers before publishing.

Package Tier	Suggested Guest Copy	Notes
Event / Starter (4–6 hrs)	<i>Ideal for up to 100 guests</i>	Mehndi, Aqeeqah, birthdays, engagement parties
1-Day Wedding (6–8 hrs)	<i>Ideal for up to 200 guests</i>	Nikkah, small Walima, single-day ceremonies
Multi-Day Wedding (2–3 days)	<i>Perfect for 200–500+ guests</i>	Full South Asian wedding — Mehndi, Baraat, Walima

NOTE TO SIR — confirm these numbers before publishing

Guest counts above are estimates based on typical coverage ratios. Review and adjust before Saikat adds them to the site. If a tier already has a fixed crew size that limits guest coverage, that's worth stating too — e.g., 'Standard 2-person crew. For 300+ guests, upgrade to include second photographer.'

4 Retouching Tier Breakdown

P1

Priority	P1 — Adds perceived value without changing the actual deliverable.
Pages	/packages — in the deliverables list of each package tier
Location	Inside each tier's 'What's Included' list, replacing or expanding the generic 'edited photos' line.

Why It Matters

Most clients don't know the difference between 'edited' and 'retouched.' When you tell them, you create perceived value and you educate them at the same time.

Ohana's breakdown: Gold gets 400 edited / 50 retouched. Premium gets 600 / 80. Diamond gets 1,000 / 100. The numbers themselves aren't the point — the distinction between the two tiers of care is. It answers: 'Am I just getting color-corrected photos, or are you actually working on each one?'

This also justifies the price gap between tiers and reduces the negotiation conversation ('why is the next tier so much more expensive?') because the added value is explicit.

What to Build

In each package tier's deliverables list, split the photo delivery into two lines. Sir to confirm exact numbers.

COPY — Starter / Event Tier

- 200+ professionally edited photos
- 25 hand-retouched portraits (skin, light, fine detail)

COPY — 1-Day Wedding Tier

- 400–600 professionally edited photos
- 50 hand-retouched portraits (skin, light, fine detail)

COPY — Multi-Day / Premium Tier

- 800–1,000+ professionally edited photos
- 80–100 hand-retouched portraits (skin, light, fine detail)

NOTE TO SIR — explain the distinction on the page too

Consider adding a one-line explainer near the packages heading:

'Edited photos = color-graded, cropped, and corrected. Retouched photos = individual work on skin tone, lighting, blemishes, and fine detail. Every package includes both.'

This educates clients and frames the retouched count as premium care, not standard workflow.

5 Free Couple Session as a Line Item

P1

Priority	P1 — Copy addition only. Likely already offered; just needs to be visible.
Pages	/packages — inside every wedding package tier's 'What's Included' list
Location	Add as a distinct line item in the 'What's Included' section of every wedding package.

Why It Matters

Ohana lists 'Free 1-hour private couple session' in every single tier — Gold, Premium, and Diamond. Even if clients intuitively expect this, seeing it listed as FREE and given its own line item makes it feel like a bonus they're receiving, not a standard they're paying for.

The psychology: once something is named and given a value in the client's mind ('this is a separate session worth \$X'), they feel they're getting more for their money. It also creates a reason to book sooner — 'We get a free session to meet you before the wedding.'

If Visual Studio already offers pre-wedding or engagement sessions as an add-on, this change involves listing it as a free include for wedding bookings instead — or adding a consultation shoot that doesn't currently exist.

What to Build

Add one line to the 'What's Included' section of every wedding package tier:

COPY — Free Couple Session Line Item

- Free 1-hour engagement / couple session (booked before your wedding day)

-- OR, if Visual Studio's version is shorter --

- Free pre-wedding consultation shoot (1 hour)

NOTE TO SIR — decide before Saikat adds this

Is a pre-wedding / engagement session already included in wedding packages? If yes: add this line item immediately — it's just copy. If no: decide whether to include it. It costs about 1–2 hours of time and builds relationship before the wedding day, which reduces on-the-day friction. Strong recommendation: include it.

6 Top-Tier Exclusive Deliverable

P1

Priority	P1 — Requires deciding on a deliverable, then surfacing it clearly in the package builder.
Pages	/packages — the highest-tier package only
Location	At the top of the top-tier package's 'What's Included' list, as the first and most visually prominent line item.

Why It Matters

Ohana's Diamond tier includes a 'Full Documentary Film (Up to 1hr)' — something the Gold and Premium tiers explicitly don't get. This creates a clear, tangible reason to upgrade that can't be replicated by adding hours or photos.

Right now, Visual Studio's package builder lets clients add drone, second photographer, same-day edit, and cinematic film as add-ons to any tier. That's flexible, but it removes the urgency to upgrade. If the best version of your work — your signature deliverable — is only available at the top tier, it becomes an aspirational purchase rather than a calculated one.

Recommended Options for the Top-Tier Exclusive

Sir to pick one. Recommendation in bold.

- **Full Documentary Film (30–60 min)** — the complete day, cinematically edited without a highlight reel length limit. Reserved for Diamond/top tier only. This is the Ohana model and it works.
- **Same-Day Edit Reel** — a 2–3 minute reel delivered the night of the wedding or within 24 hours. Extremely viral and shareable. High wow-factor.
- **Director's Cut Film** — an uncut, director's version of the wedding film — longer, more intimate, with full ceremony audio. Different from the cinematic highlight reel.
- **Private Viewing Night** — invite the couple to a private gallery viewing session where they see their photos/film for the first time together, in a curated setting. Unique and extremely shareable.

What to Build

Once Sir confirms the exclusive deliverable:

- Add it to the top-tier package's 'What's Included' list as the FIRST line item
- **Add a 'TOP TIER EXCLUSIVE' or 'Only in Premium' badge** next to it — a small colored tag that makes it visually distinct from the other line items

- Remove this deliverable from the add-on section OR mark it as 'Included in Premium — available as add-on for other tiers at \$X'
- Update the package description tagline to reference it: 'Our most complete wedding experience — including the full documentary film available nowhere else.'

7 Pricing Disclaimer Under Packages

P0

Priority	P0 — One paragraph of copy, zero design, protects against price-shoppers.
Pages	/packages — directly below the package tier display, above the footer
Location	A single paragraph or callout block placed below all package tiers and the package builder, before the newsletter subscription section.

Why It Matters

Ohana adds this line: 'Pricing varies based on the event location and date. For an accurate quote, please contact us with your event details.' This does three things:

- Protects against clients who screenshot prices and try to hold you to them regardless of circumstances
- Opens a conversation — 'contact us with your event details' turns a browser into a lead
- Sets expectation that the price shown is a starting point, not a final quote — reducing sticker-shock on the call

What to Build

Add the following block directly below the package builder / tier display on /packages. This is a purely static text addition.

COPY — Pricing Disclaimer Block

Every wedding is different — and so is every quote.

The pricing shown reflects typical starting points. Final pricing varies based on your event location, number of days, crew preferences, and specific deliverables. We never surprise you with hidden fees.

To get your custom quote, reach out with your wedding date, location, and what you have in mind — and we'll build your package together.

[Contact Us] button → routes to /contact or Calendly

[Chat on WhatsApp] button → <https://wa.me/13473066637>

Styling note: this should feel warm and conversational, not like legal fine print. Consider placing it in a light-background callout box rather than tiny gray text. The goal is to turn a price-browser into a lead.

8 Named Testimonials With Real Names

P1

Priority	P1 — Content collection required before build. Saikat builds the UI; Sir supplies the reviews.
Pages	Homepage (primary) + /about + /contact
Location	Homepage: dedicated 'What Our Clients Say' section between the portfolio preview and the booking CTA. On /about and /contact: secondary review strip alongside other social proof.

Why It Matters

Ohana's homepage has 6 named reviews — Malaika, Zainab, Sayema, Nasheed, Saima, Sophia. Not 'Happy Client.' Not 'A. M.' Real, full first names. The effect is immediate and measurable: named reviews are trusted more, feel more real, and communicate cultural fluency — those are recognizably South Asian and Muslim names, which signals to the target client 'people like me trusted them.'

Currently Visual Studio has no dedicated testimonials section hardcoded on the site. This is a significant credibility gap for a business where every client makes a 4–5-figure emotional purchase on trust.

What to Build

8a — Testimonials Component

Build a reusable testimonial card component that accepts:

- **name** (first name only is fine)
- **event_type** (Bengali Wedding, Pakistani Nikkah, Corporate Event, etc.)
- **review_text** (the actual review, 2–4 sentences ideal)
- **photo** (optional — even just initials in a circle is better than no avatar)
- **source_badge** (optional — 'Google Review' or 'Instagram' if applicable)

8b — Homepage Section

Section heading copy

Primary: 'What Our Clients Say'

Sub-heading: 'Real families. Real weddings. Real words.'

Display 5–6 testimonial cards in a grid or horizontal scroll. For 5–6 real named reviews it can be a static grid. If reviews grow to 10+, consider a carousel or masonry layout.

8c — Content Sir Needs to Collect

Saikat can build the UI shell immediately. The reviews themselves need to come from Sir. Sources to pull from, in order of priority:

- **Google Business Profile reviews** — these are publicly attributed already, so no permission needed
- **Instagram DMs or tagged post captions** — screenshot, ask for permission to quote with first name (most clients are happy to)
- **Pixieset gallery comments** — clients often leave notes when downloading galleries
- **WhatsApp messages after delivery** — those effusive 'THESE ARE AMAZINGGGGG' messages are gold. Screenshot, ask permission, use.

SAMPLE TESTIMONIAL STRUCTURE — for each review Saikat hardcodes

```
{
  name: 'Zainab R.',
  event_type: 'Pakistani Wedding — Brooklyn, NY',
  text: 'Visual Studio captured our Nikkah and Walima better than we could have imagined. The female photographer made my entire family feel at ease — especially during the women-only Mehndi. I cry every time I rewatch the film.',
  source: 'Google Review',
  rating: 5
}
```

NOTE TO SIR — placeholder strategy

If real reviews aren't collected yet, Saikat can build the component and display 2–3 real ones (even from Google Business) as placeholders. Don't launch with fake or generic reviews — one real named review beats six polished anonymous ones every time. Also: once the component is built, add a 'Leave us a review' CTA button at the bottom of the section linking to the Google Business listing. Turn happy clients into public reviewers.

Implementation Checklist

All 8 features, ordered by do-first priority. Saikat: check these off as each one ships.

Do ne	#	Task	Needs from Sir	Priority
[]	1	WhatsApp button in header nav	Phone number (already: 347-306-6637)	P0
[]	1	WhatsApp link in footer contact block	Same	P0
[]	7	Pricing disclaimer below package builder	Approve copy	P0
[]	2	Team trust signal copy on /about opening	Approve + personalize the draft copy	P1
[]	3	Guest counts added to each package tier	Confirm guest count numbers	P1
[]	4	Edited / retouched photo split in deliverables	Confirm edited + retouched counts	P1
[]	5	Free couple session added as line item	Confirm it's included (or add it)	P1
[]	6	Top-tier exclusive deliverable chosen + badged	Decide which exclusive deliverable	P1
[]	8	Named testimonials component built (UI only)	None — build shell first	P1
[]	8	Named testimonials content collected + populated	Collect 5–6 named reviews from real clients	P1
[]	1	Floating WhatsApp button (optional)	Approve or decline the floating button	P2

JazakAllah khair,

Mohammed Sakib Mahmood

Founder, Visual Studio | Visual Inked LLC
